EDUCATION

B.S. Computer Science, Boise State University (2023)
B.S. Mathematics (Computation Option), University of Idaho (2021)

EXPERIENCE

Software Engineer | Foerstel+Piper+Martin | **Nov 2025 - Present**

- Serve as the primary developer responsible for maintaining and enhancing a critical web application using PHP, JavaScript, Laravel, and PostgreSQL.
- Refactor and modernize legacy application code, reducing technical debt and improving maintainability.
- Design and implement database schema updates, migrations, and data fixes to support evolving business requirements.
- Deploy code changes to production, managing the full release process from development through deployment.
- Collaborate directly with stakeholders to gather requirements, prioritize work, and deliver technical solutions aligned with business needs.

Software Engineer | Tovuti LMS | **May 2022 - Aug 2025**

- Developed multiple LMS features using PHP, JavaScript, and MySQL for a platform serving 100,000+ users.
- Designed and maintained Laravel API endpoints supporting mobile applications, increasing API reliability and reducing downtime to < 0.01%.
- Collaborated with product, design, and QA teams to deliver user-friendly reactive interfaces aligned with client requirements.
- Delivered features and bug fixes across multiple release cycles within an Agile development environment.

Software Development Intern | Tap Network LLC | **Jan 2022 - May 2022**

- Developed features for an Ionic mobile application and implemented client-requested functionality.
- Improved code maintainability through documentation and collaboration on scalable development practices.

TECHNICAL SKILLS

Languages: PHP, JavaScript, Python, Java, C#

Frameworks: Laravel, React

Databases: MySQL, PostgreSQL

Tools: Git, Linux, AWS, REST APIs, CI/CD, Docker, Agile/Scrum

PERSONAL PROJECTS

Independent Game Development | Redpoint Interactive | **GDScript, Python, C#, Git**

- Developed and released a commercial indie game on Steam, implementing physics based gameplay systems, UI, and supporting infrastructure.
- Currently developing a second game, utilizing a custom simulated file system, command-line interface, and branching investigation system.
