Boise, ID | (208) 761-2179 | <https://github.com/malberda> | malberda15@gmail.com

EDUCATION

B.S. Computer Science, Boise State University (2023)

B.S. Mathematics (Computation Option), University of Idaho (2021)

EXPERIENCE

Software Engineer | Foerstel+Piper+Martin | **Nov 2025 - Present**

- Serve as the primary developer for a business-critical web application, independently maintaining and implementing changes using PHP, JavaScript, Laravel, and PostgreSQL.
- Analyze and modernize legacy application code to improve maintainability, reliability, and long-term supportability.
- Design and implement database schema changes, migrations, and data corrections to support evolving business requirements.
- Manage the development-to-production release process and work directly with stakeholders to identify requirements, troubleshoot issues, and deliver solutions.

Software Engineer | Tovuti LMS | **May 2022 - Aug 2025**

- Developed and maintained LMS features using PHP, JavaScript, and MySQL for a platform serving 1M+ users across dozens of sites.
- Designed and maintained REST API endpoints supporting mobile applications with an emphasis on reliability and maintainability.
- Collaborated with product, design, and QA teams to analyze requirements and deliver software across multiple release cycles.
- Investigated and resolved software defects while maintaining existing functionality in a large production codebase.

Software Development Intern | Tap Network LLC | **Jan 2022 - May 2022**

- Developed features for an Ionic mobile application and implemented functionality based on client requirements.
- Improved code maintainability through documentation, testing, and collaboration with the development team.

TECHNICAL SKILLS

Languages: PHP, JavaScript, Python, Java, C#, GDScript

Frameworks: Laravel, React

Databases: MySQL, PostgreSQL

Tools: Git, Linux, Docker, REST APIs, CI/CD, Agile/Scrum

PERSONAL PROJECTS

Independent Game Development | Redpoint Interactive | **GDScript, C#, Git**

- Developed and released a commercial indie game on Steam, implementing physics-based gameplay systems, UI, and supporting software infrastructure.
- Developing a second game featuring a simulated file system, command-line interface, and branching investigation system.
